ISO 27001 Certification
Information system security management

Protect your data !

In the current context of an increase in the risks of loss or leakage of data, through a proven methodology, ISO 27001 certification allows you to establish an information system security management system.

The auditor will in particular focus on examining with you your risk analysis, through the Confidentiality, Integrity, Data availability triptych. The implementing of security measures, the most «practical» section of the certification, is then audited.

The benefits

- Identify the risks that bear down on your structure, on your data
- Set up the correct actions to protect your data
- Enhance your image
- Meet the stakes of your customers
- Increase employee responsibility
- Demonstrate your compliance with national and international legislation

The procedures

ISO 27001 certification is a voluntary certification. To apply for certification in the best conditions, it is desirable :

- that your system has been in place for at least 6 months,
- that an internal audit has been conducted,
- that a management review has been conducted.

It is intended for any type of organisation, irrespective of their size, organisation, activity sector.

Validity of the Certificate

3 years, with annual follow-up audit.
